

Felipe López Montes

Data Platform Engineer | PostgreSQL | AWS | Database Performance

Data Platform Engineer with experience designing and maintaining reliable data systems, database platforms and integration workflows. My background combines Database Engineering, Data Engineering, and backend development, allowing me to build solutions across the complete data lifecycle: data ingestion, transformation, storage and operational reliability.

Granada, Spain

TECHNICAL SKILLS

Database: PostgreSQL, SQL, Query Optimization, Indexing, Schema Design, Migrations.

Cloud: AWS, AWS RDS, AWS Lambda, AWS ECS, Docker, Kubernetes, Jenkins.

Operations: Monitoring, Performance Tuning, Security, Backups.

Development: PHP, Symfony, APIs, Git.

PROFESSIONAL EXPERIENCE

Aircury. Data Platform Engineer. 10/2025 – Present (Remote)

Building on previous Data Engineering responsibilities while expanding ownership of database platform standards, reliability and operational practices.

Defining and **overseeing** database **standards** covering schema design, migrations, access control, backups, recovery, maintenance, monitoring and performance.

Promoting **safe database change practices** to reduce production risk and operational debt, while monitoring critical risks, capacity, **query performance** and recovery readiness.

Supporting teams with **complex database diagnostics** and decisions around persistence, indexing and operational safeguards, strengthening recovery confidence through documented **procedures**, backup discipline and periodic restore validation.

Aircury. Data Engineer. 03/2024 – 10/2025 (Remote)

Data analysis and integration using PHP-Symfony and **PostgreSQL**, connecting platforms such as **Salesforce** and the UK Department for Education (DfE) API, among others, to download, process and transmit information efficiently, balancing technical quality with development timelines.

Database optimization through query improvement, bottleneck resolution, permissions management and data normalisation.

Deployment management and monitoring of integrations on **AWS**, maintaining direct communication with the client and using Git and GitHub for version control.

Aircury. Full-stack Web Developer. 08/2022 – 10/2023 (Remote)

Worked full-stack for the CEC, a UK education client in a SCRUM environment, using ReactJS, PHP-Symfony, **Doctrine**, and **PostgreSQL**. Developed features, integrated Salesforce and APIs, followed TDD/BDD, and collaborated with QA and Support. Used **Docker**, **AWS**, **Kubernetes**, **Jenkins**, JIRA, and GitHub.

Strategic Thinking. Full-stack Web Developer. 05/2021 – 12/2021 (Remote)

LANGUAGES

English: Professional (C1)

French: Intermediate (B2)

Spanish: Native

Galician: Native

EDUCATION

10/2023-12/2023

Data Science

Bootcamp

Le Wagon, Zürich

2016-2022

Bachelor's degree in
Computer Engineering

University of Vigo

2016-2022

Bachelor's degree in
Business Administration

University of Vigo
